Training Tracker

Think Safe understands training and Training programs, and we don't stop at providing certificates. A training program and related HR and uncompliance tracking needs are a big undertaking - but it does not have to be with the help of technology and software.
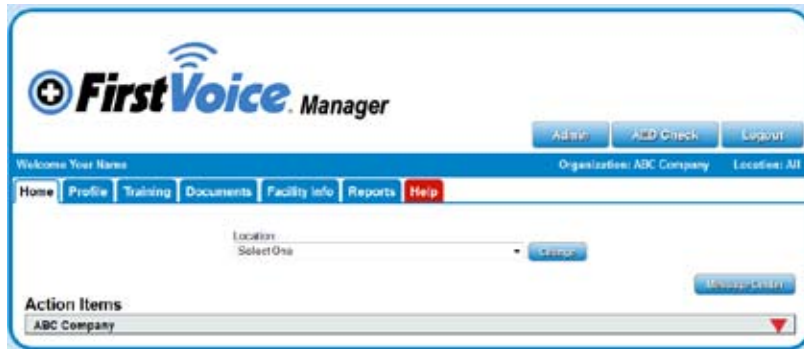

The First Voice Manager: Training Tracker application is an industry leading free application for your training & communication needs regarding CPR, AED, and first aid related training.

No software to download!
Any computer, PC or smart phone with an internet browser can access the application.

Easy to use interface.
The application has windows that collapse or expand to see organized views of training courses and students/staff.

UNLIMITED ACCESS
There is no limit to the number of users that can access the database. All locations and organizations are assigned privilege-based user logins.
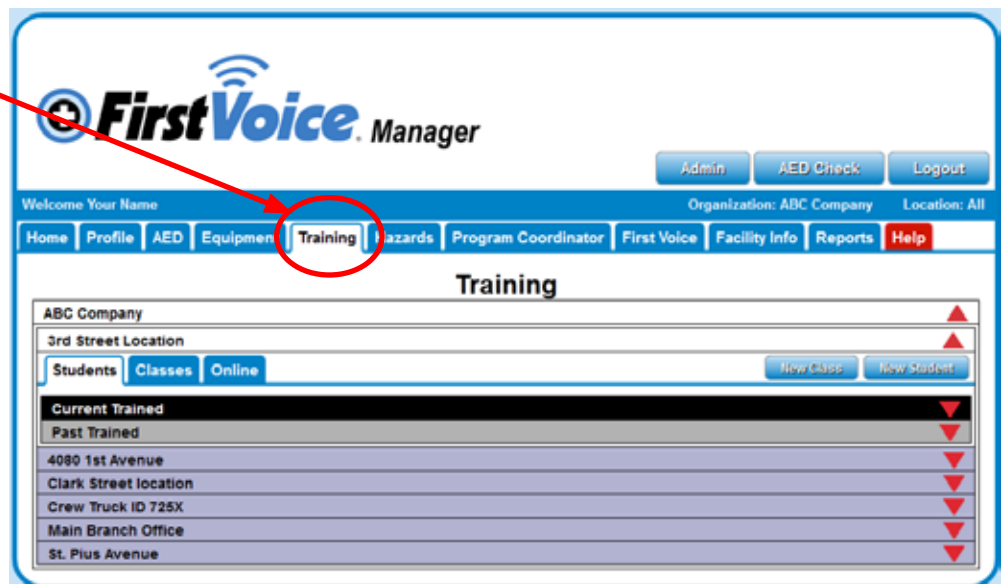

REDUNDANCY
All users receive pertinent communication on ALERTS (upcoming items or past-due items) or REPORTS that are relevant to their user privileges. Auto-notifications of these make the program an effective contingency planning tool. This provides redundancy in record keeping and data backup for your entire first aid or safety program as it relates to related training needs.

TRAINING
All personnel trained for your organization in the first aid, CPR or AED program can be imported and tracked going forward. Any training course they have taken can also be uploaded and tracked! (Upgrade fee applies)

Alerts and reports notify the end user and the organization coordinator about upcoming or past due courses.

Allows for redundancy reporting, even if your facility already has a tracking or LMS system. Data can be easily requested.

Training from the First Voice Training portal automatically is uploaded to alleviate data-entry workload for your organization. Training rosters can be uploaded (.csv or .xls file) into the software by course/ class to alleviate workload.
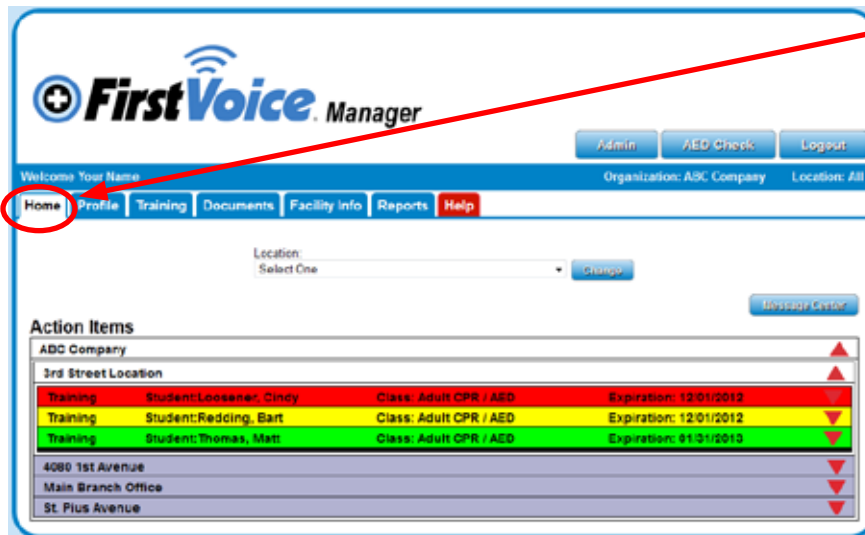

REPORTS
Reports show current trained, past trained (old certifications that expired) and upcoming training needed.

HIERARCHY
The program has several levels of hierarchy so anyone from VIEW ONLY users to EDIT users with access to only one location to numerous locations can be granted. MANAGEMENT (Administrative User) privileges allow higher-level top-down reporting and monitoring as well.

COMMUNICATION
All or select users for an organization can be set up on auto-notifications for recalls or reminders, and any alerts or non-compliance issues.

URGENCY / ALERTS
Immediately upon login, the Home Screen shows any immediate action items that need to be addressed.

Screen print to the left shows **action items** upcoming – this is the first screen seen upon LOGIN to en-sure they are addressed promptly.

Only those items that pertain to the USER that has logged in will be shown!

Upgrades (low cost annual license fees applies)
Ask about how First Voice Manager can also be used to track equipment, equipment maintenance, licenses, immunizations, document and reports due dates, or other compliance tracking needs.

TECHNICAL SUPPORT
We are here to help bring technology to your first aid, safety or AED-related programs. Think Safe is a solutions provider and customized solutions are available upon request. Full demo and user guide are available for review.
